2016

Time does fly....

It's almost the end of the year. Just a few more weeks left in 2015. The old year will leave us for good or bad. Let the old past be where it is. In the coming year of 2016, we welcome and hail new opportunities and possibilities for the next 12 months.

The world economy and indeed the Telecom industry has experienced immense and tremendous challenges in 2015. Coupled with the drop in oil price and the geo-political scenario, the uncertainty of the world economy will remain the key and important aspect of the industry as a whole even though there are signs recovery trend. With this in mind, for the year 2016 we will foresee that there still are many challenges and opportunities alike available that the industry faces.

For 2016 and beyond, Internet and related services and applications will remain the key growth driver for telecom industry. By end of 2015, half of the world population are the users of internet and 50% of them are from Asia.

WORLD INTERNET USAGE AND POPULATION STATISTICS						
NOVEMBER 15, 2015 - Update						
World Regions	Population (2015 Est.)	Internet Users Dec. 31, 2000	Internet Users Latest Data	Penetration (% Population)	Growth 2000 -2015	Users % of Table
Africa	1,158,355,663	4,514,400	327,145,889	28.2 %	7,146.7%	9.8 %
Asia	4,032,466,882	114,304,000	1,611,048,215	40.0 %	1,309.4%	48.1 %
Europe	821,555,904	105,096,093	604,147,280	73.5 %	474.9%	18.1 %
Middle East	236,137,235	3,284,800	123,172,132	52.2 %	3,649.8%	3.7 %
North America	357,178,284	108,096,800	313,867,363	87.9 %	190.4%	9.4 %
Latin America / Caribbean	617,049,712	18,068,919	339,251,363	55.0 %	1,777.5%	10.1 %
Oceania / Australia	37,157,120	7,620,480	27,200,530	73.2 %	256.9%	0.8 %
WORLD TOTAL	7,259,900,800	360,985,492	3,345,832,772	46.1 %	826.9%	100.0 %

One of the key trend for the next few years will be the proliferation and the adoption of IoT or Internet of Thing. The technology and the application will be the next major trend that will impact the explosion of connected devices. This will add billions of new connected data sources globally by 2020. The upswing of all of these devices will be an astronomical growth in data volumes; we will quickly push through exabyte volumes and enter the world of zettabytes per year.

The "Internet of Things" describes an unprecedented blueprint for industries such as telecom and IT. It is predicted that by 2020, the ratio between machine type communications to human type communications will reach 30:1, which will allow operators to extend their subscriber base from 6 billion people to 50 billion or even over a trillion machines and objects, and thus opens a new door and serves as the basis for "surpass population and developing new subscribers" for the telecom industry.

The demand for bandwidth will definitely increase in line with this trend. Aries Telecoms has upgraded its network to meet the explosive demand of bandwidth with our DWDM and metro-ethernet network infrastructure. To address the need for unlimited IP addresses, we have completed the network upgrade which is fully **IPv6** enabled.
